JOE MASSAD, DDS / Co-founder of Massad Center for Removable Prosthodontics

COURSE OBJECTIVES...

- Review simplified and practical concepts in Removable and Implant Removable Prosthodontics of today, and define the advantages and disadvantages vs. past methods.
- Discuss various problems commonly associated with the edentulous and implant overdenture patients and methods to intercept these problems before committing to treatment of the patient.
- Master the tissue character and tissue mobility classifications

and how these relate to choosing a surgical solution or a design alteration in the final prosthesis.

- Describe the clinical technique in developing the final prosthesis for the various boney and tissue edentulous conditions with complete and implant immediate denture appliances.

- Concepts Include – Impression taking, Vertical Dimension of Occlusion, Cameo,

DAY ONE...

MORNING: A demonstration of the complete assessment and examination on a patient utilizing a protocol that utilizes a digital application will be detailed. This generally will set the basis for the remaining day and a half of class time. The attendees will be able to view over the doctor's shoulder a complete

examination and assessment which will determine the degree of success prior to accepting a patient for treatment. The examination was developed as a diagnostic and prognostic method, to allow both patient and dentist the ability to accept or deny treatment at the examination appointment.

AFTERNOON: Demonstrations on patients of impression making of both edentulous and implant over denture patients will be performed by the instructors while the dentists observe over the

shoulder. Each student will be able to take part in at least one portion of the impression in order to have a better grasp of the entire procedure.

DAY TWO...

MORNING: Patients will be utilized in making records utilizing prefabricated base plates. Records will include a physiological neutral zone recording; a vertical physiological centric relation recording; and an anterior setup determining patient esthetics followed by a face bow record. Each applicant will be viewing

over the dentist's shoulder and as time permits attendees will be allowed to assist and perform a part of the procedure.

AFTERNOON: In the afternoon of day two the attending dentist will be able to perform one or more of the procedures while the doctors look over their shoulders to coach them.
